

## 05.1 - Maze

Download the files `maze_template.py` and `maze.png`, and place them in the same folder. Then, starting with the code provided in `maze_template.py`, write turtle commands into the program's main function to move the turtle from the center of the maze to the exit on the right-hand side. Make sure your turtle never touches a wall (black lines). Save your program as `maze_login.py`, where login is your Purdue login. Then submit it along with a screenshot showing your solution.

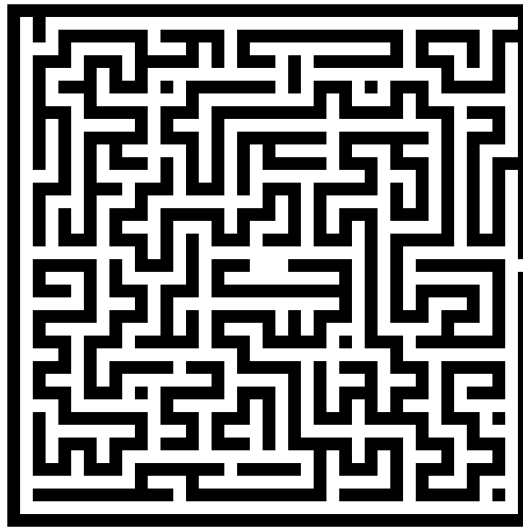

Figure 1: Turtle maze for Exercise 05.1.

### Hints:

- Do not modify the size of the canvas provided in the template.
- The squares in the grid are 12 pixels by 12 pixels.
- There are many possible solution paths.
